Claim 22:

On *[line 2]* of the claim, please change “stencil for the job definition statement contains” to --stencil contains--.

Allowable Subject Matter

3. Claims 1, 3-6, 8-14, and 16-22 are allowed.

4. The following is an examiner’s statement of reasons for allowance:

Examiner has carefully considered claims 1, 3-6, 8-14, and 16-22.

The closest prior art, Park et al (Pub. No US 2001/0039594 A1), teaches a method for enforcing workflow processes for website development and maintenance *[paragraph 10, lines 1-2]*. Upon completion of a task, approval of the work performed may be required by one or more entities before further work is done to the resulting file or files *[paragraph 12, lines 1-3, 9-14]*. A template script contained within a workflow template file *[paragraph 56, lines 5-7]* along with workflow markup sets the workflow

Art Unit: 2173

rules *[paragraph 44, lines 1-3]* used to create a job specification file *[paragraph 41, lines 4-7]*. A job may be created through end-user input from a browser interface *[paragraph 41, lines 4-7]*. The job specification file is preferably structured as a hierarchy of sections, each containing an element definition that provides for control of a job parameter. An initial <workflow> section defines the overall characteristics of the job, which may include the job's name, owner, creator, and a description of what the job does *[paragraph 34, lines 5-12]*. One or more task sections that describe tasks to occur as part of the job follow the initial <workflow> section of the job specification file *[paragraph 36, lines 1-6]*. Each of the elements that define sections in a job specification file may include a start attribute which specifies whether the task should be active upon invocation of a job that contains the task *[paragraph 36, lines 10-12]*, a timeout limit for completion of a task (e.g. when the timeout is exceeded, the task may be deactivated and a next task element activated) *[paragraph 36, lines 19-21]*, and an indication as to when the task is to become active (e.g. when signaled by a preceding task) *[paragraph 36, lines 22-26]*. A sub-element may specify possible alternative sets of successor tasks to signal when the task is completed *[paragraph 37, lines 1-5]* and an <endtask> element indicates the end of a job. When an <endtask> element becomes active, its containing job may be terminated and all locks held by the job released *[paragraph 37, lines 20-23]*.

Nowhere in Park, nor any of the cited arts of records discloses, suggests, nor teaches a method for an information processing system including a plurality of information processing devices that execute a policy command action concerning a

same job wherein the information processing system interprets elements in the job definition statement and executes a corresponding process for each element, the elements including a root element in the job definition statement, referred to as a policy, an element for grouping policy conditions and policy actions, referred to as policy rules, an element for grouping a plurality of the policy rules, referred to as a policy group, an element that waits for an event, referred to as a policy wait event condition, an element that waits for a specified amount of time, referred to as a policy schedule condition, an element that waits for a specified policy command action to terminate referred to as a policy command result condition, and an element that defines a validity period of a root policy rule, referred to as a policy rule validity period, as recited in claim 1. Similar subject matter is disclosed in independent claims 10, 12, 13, 14, and 16.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
